Loyalty tiers to be dynamically received from Salesforce

Available regions

Global

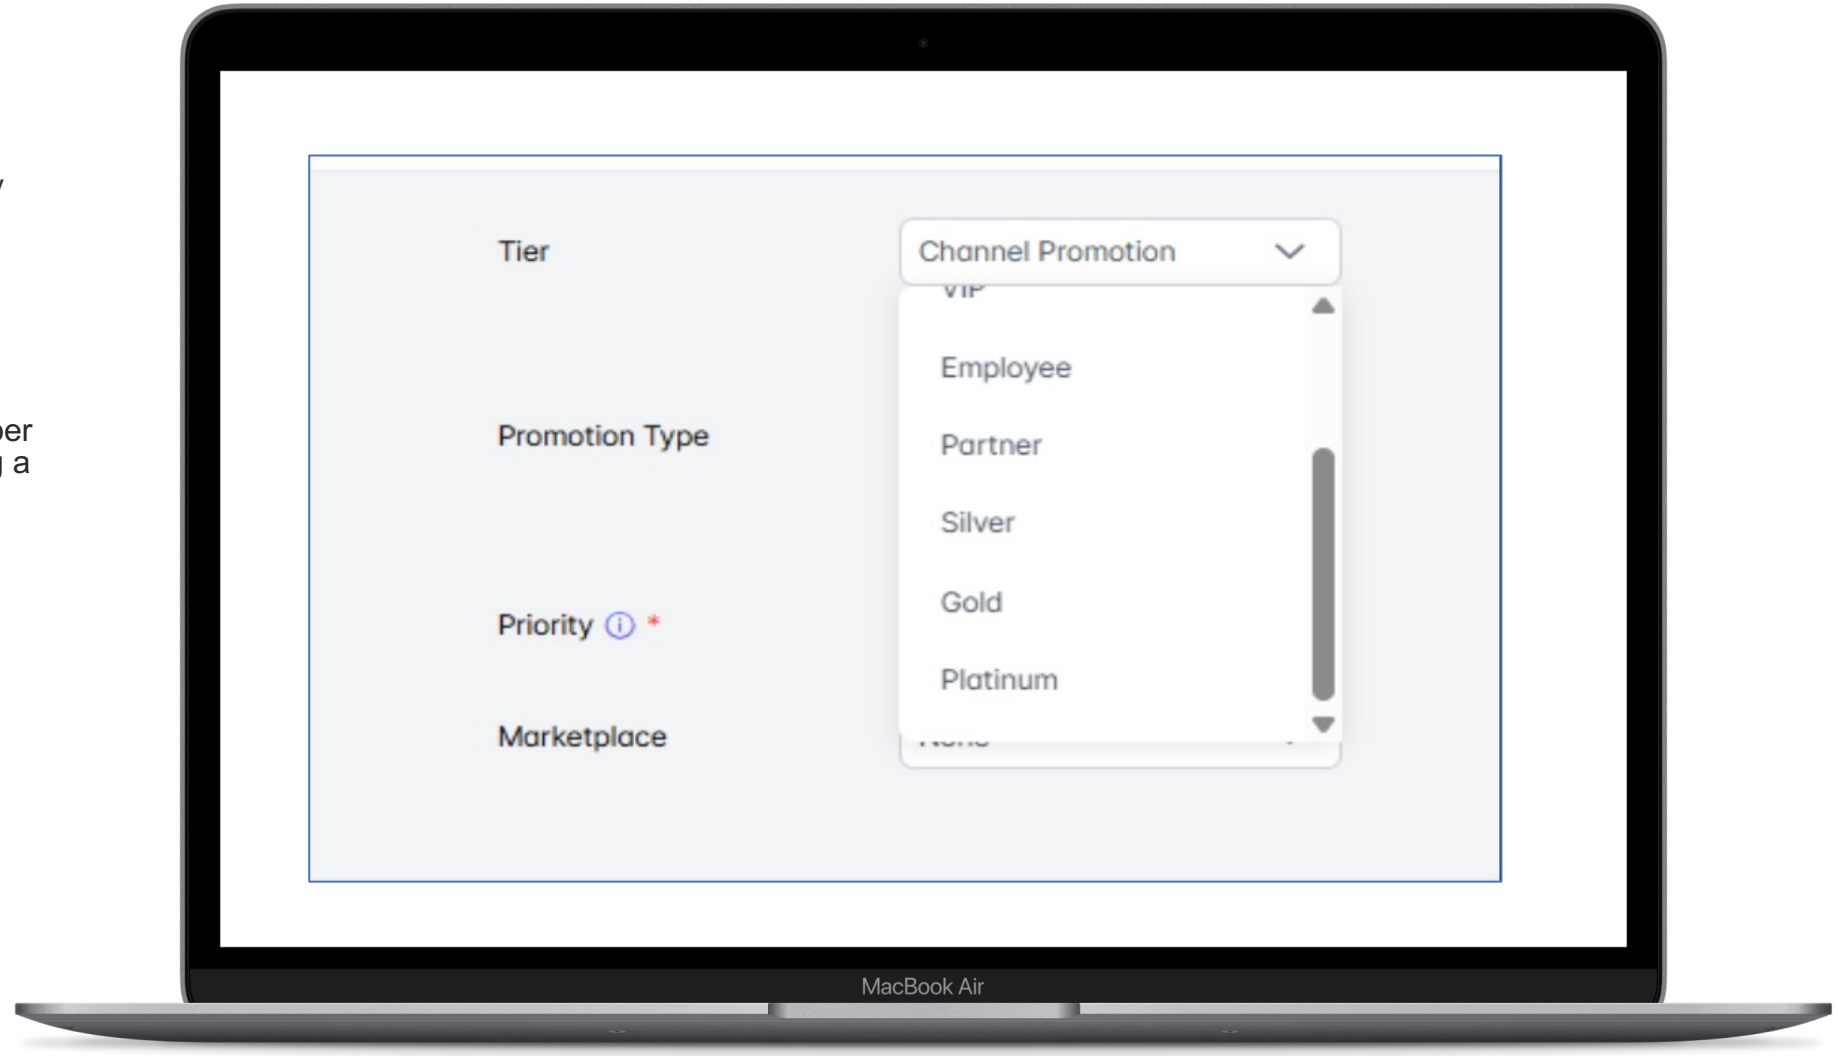
Go Live: Jan Release

Goal

Receive Club Avolta customer tiers dynamically from Salesforce for Non-ADV promotion

Description

This feature is to receive the Club Avolta member tiers from Salesforce directly instead of keeping a static list.
This would be helpful in setting up the correct Non ADV promotions for the tiers that are present.



Add Shopping bags in OMS during the Order creation process

Available regions

Global

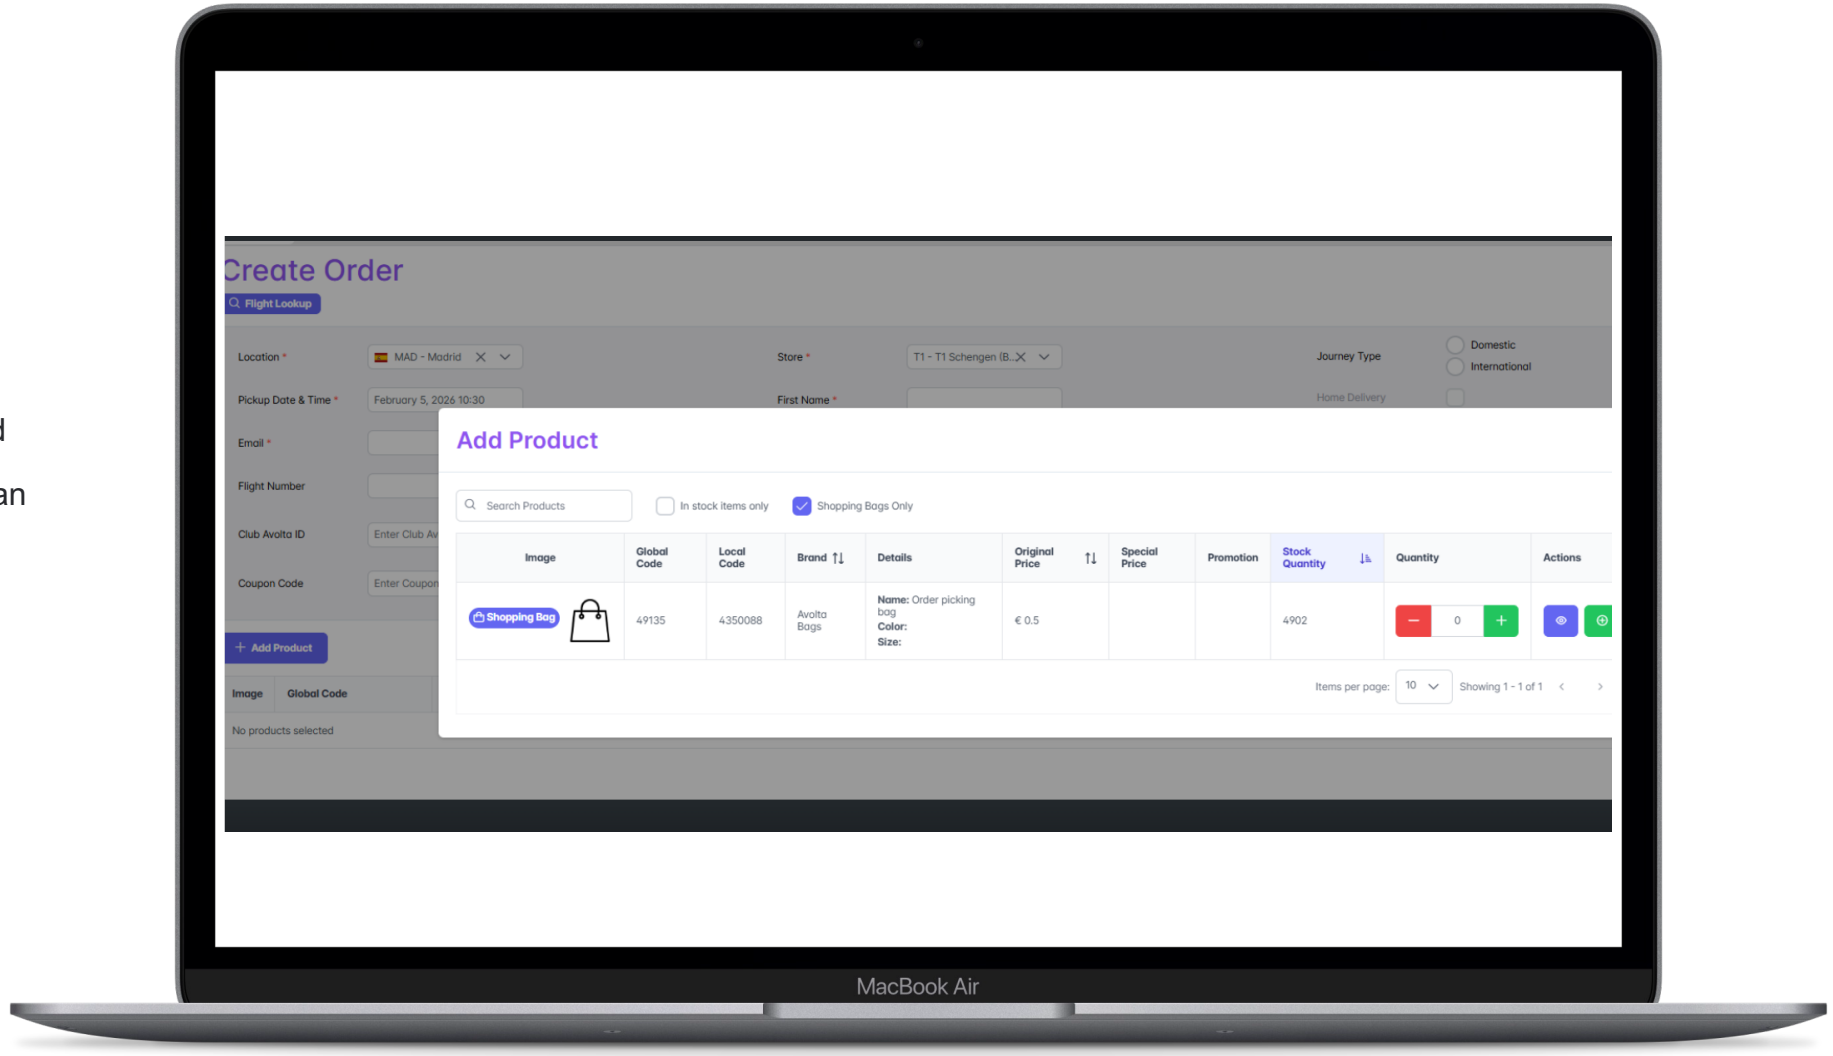
Go Live: Feb Release

Goal

Option to add Shopping bag to an order on OMS during the Order creation process

Description

This request is mainly from Spain, but this could be extended to other locations where there is a need to allow the addition of Shopping bags to an order.
These bags are identified using a different flag and it would make it easier for the Staff to add one or more shopping bags to an order



Display the Shopping bag which has been added to an order

Go Live: Jan Release

Goal

Differentiate Shopping bags from other items if added to an order

Description

The purpose of this requirement is to identify the shopping bags that is/are added to an order. A new tag 'Shopping bag' has been added to differentiate the shopping bags with the regular items.
Shopping bags could be added in any of the systems during the order creation such as App or Web, and on OMS this would be received, but displayed differently.

Display the total count of the orders that are Fulfilled and Ordered

Go Live: Jan Release

Goal

Display the total count of fulfilled vs Ordered quantities

Description

This feature would allow the OMS operations staff to check the total count of the items that are ordered. This would make it easier during the collection process, to quickly check the count of all the items across all the lines, instead of counting each item one by one.

Filter the orders based on the Delivery Statuses

Available regions

Global

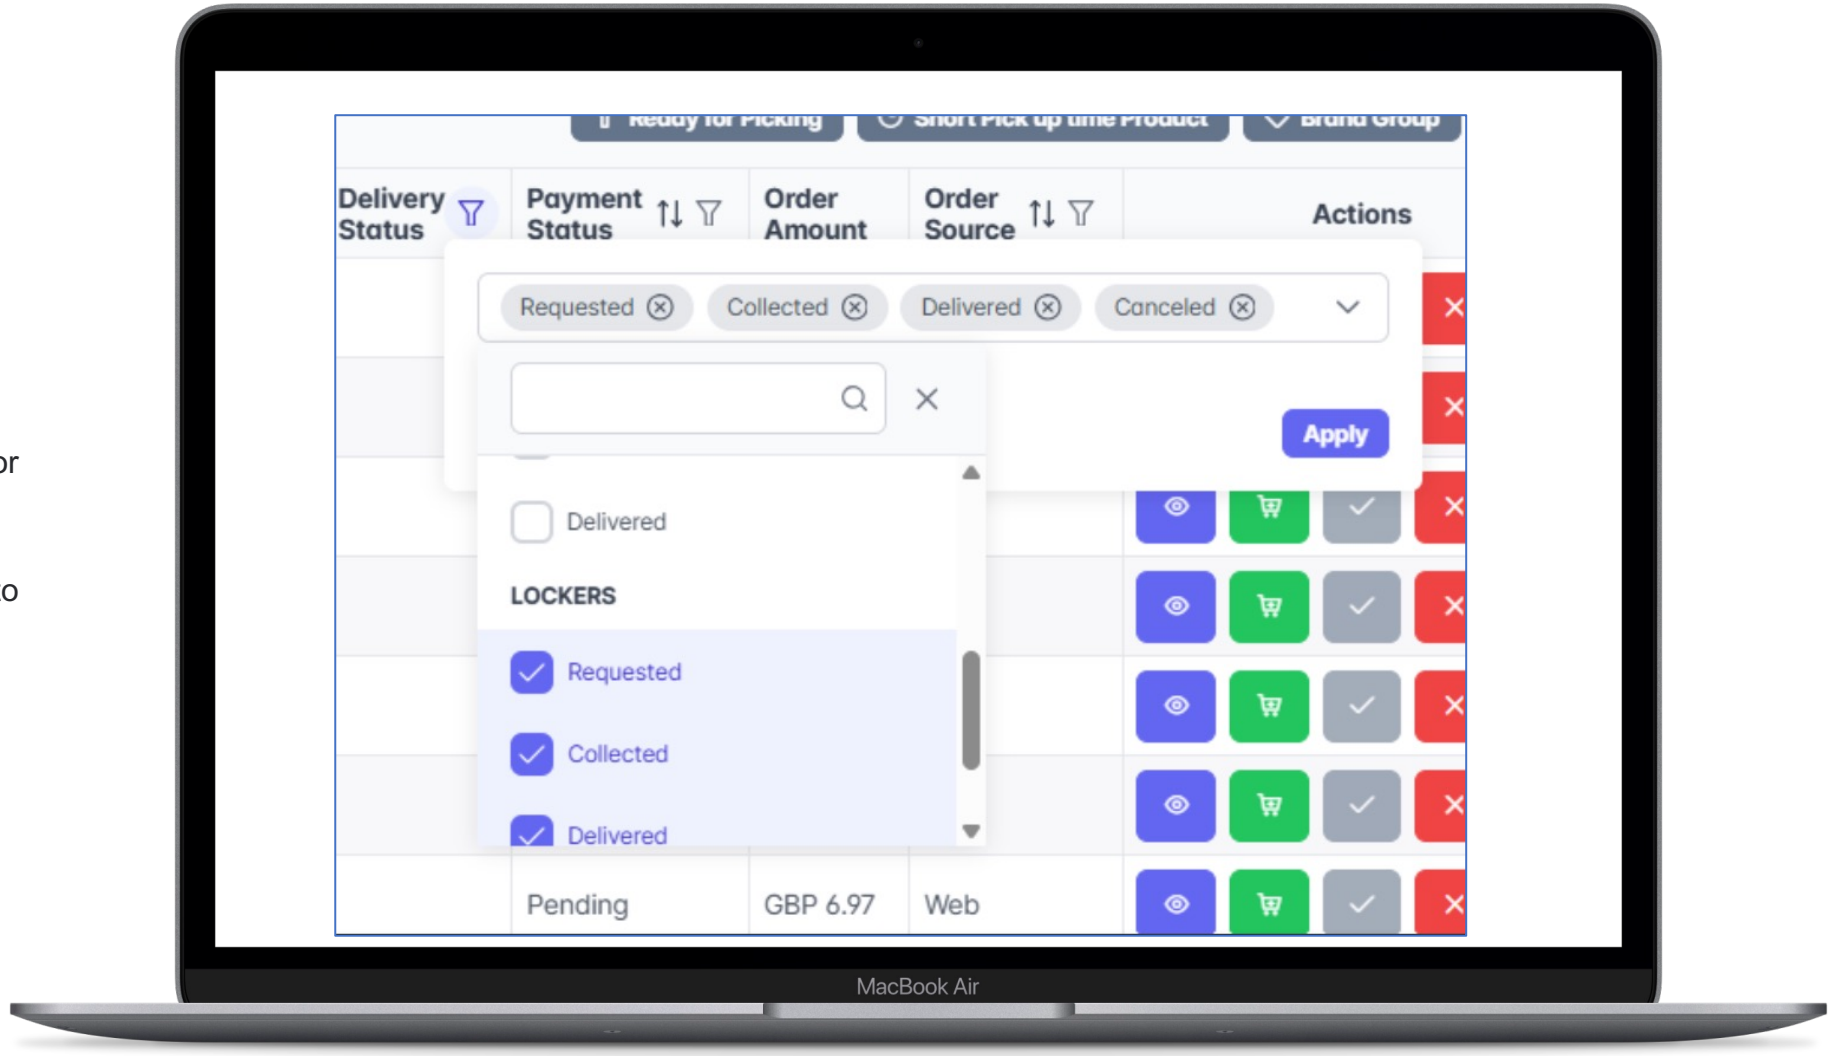
Go Live: Feb Release

Goal

Filter the order based on Delivery status on the orders Grid page

Description

This feature is to allow the OMS user to quickly filter the orders based on the Delivery status. For example, if an order has been delivered to a locker, this could be checked directly on the Orders list age (orders grid page)
It would make it easier for the operations team to reach a specific order efficiently.



Addition of Delivery history tab as a part of Order details page

Go Live: Feb Release

Goal

Trask the Delivery statuses and Delivery location for an order

Description

OMS would track the different delivery statuses that has been selected by the OMS staff for an order.
This is to make sure that the users are following the correct process when a Locker delivery is requested as an example and the steps that are taken by the staff to move the order to a locker.
This would also track the user who has performed the action so this would be a form of Audit trail.
