Avolta

March 2026 Digital Book

12/03/2025

Purpose of this document

What you'll find?

This document offers an overview of the items included in the August 2025 web Magento & App release in addition to OMS enhancements (internal customer facing). Included are visuals of the key enhancements plus a full appendix list of each change being deployed.

Frequency

This pack is issued monthly in advance of the Web & App release.

Audience

Internal only. All Avolta team members who need to be informed on latest evolutions on their digital products.

Key

Go live: Nov release	Means items will immediately show in production for May release, this icon means development is planned to go live and will be visible in production in Nov 2025.
Content Golive: Ongoing: Nov	Means content readiness will inform production launch. This is currently in progress and will continue throughout the month of Sep
Sub region request	Means request was directly submitted in JIRA or SNOW by a region.
Set up required	Means tickets requires further set up and configurations

Web

In a nutshell

1. UK - Price per unit
2. BR – Airport Selector Update
3. LGA LaGuardia & Newark A RnC orders need to have 3% airport surcharge
4. Cookine Banner

Avolta

2. UK - Price per unit

Website
Reserve & Collect
Emporium
Staff Shopping
App

Go Live feb

Goal

Enable legally compliant unit pricing across all UK digital customer surfaces, ensuring clear and accurate price per unit display everywhere a product price appears.

Description

we’re introducing transparent unit pricing wherever product prices are shown online. Whether you’re browsing listings, viewing product details, exploring promotions, or checking your cart, you’ll see prices broken down per litre, per kilogram, or per item (as required by UK law). This consistent approach will make it easier to compare products and ensure we meet all government guidelines, just like on our store shelves.

2. BR - Airport selector Update

Website
Reserve & Collect

Go Live feb

Goal

Implement a terminal selector that only displays valid terminals matching the business line (duty-free or duty-paid), ensuring users see relevant options and preventing cross-business-line selection.

Description

To make choosing the client departure terminal simple and accurate, our new selector will only show them terminals that match their shopping experience.

- Duty-free websites will list just international terminals.
- Duty-paid (Dufry Shopping) will show only domestic airports.

No matter if they shop online or in the app, they will always be guided to the right terminal and product assortment—making for a smoother, more relevant journey every time.

3. LGA LaGuardia & Newark A RnC orders need to have 3% airport surcharge

Website

Reserve & Collect

Go Live feb

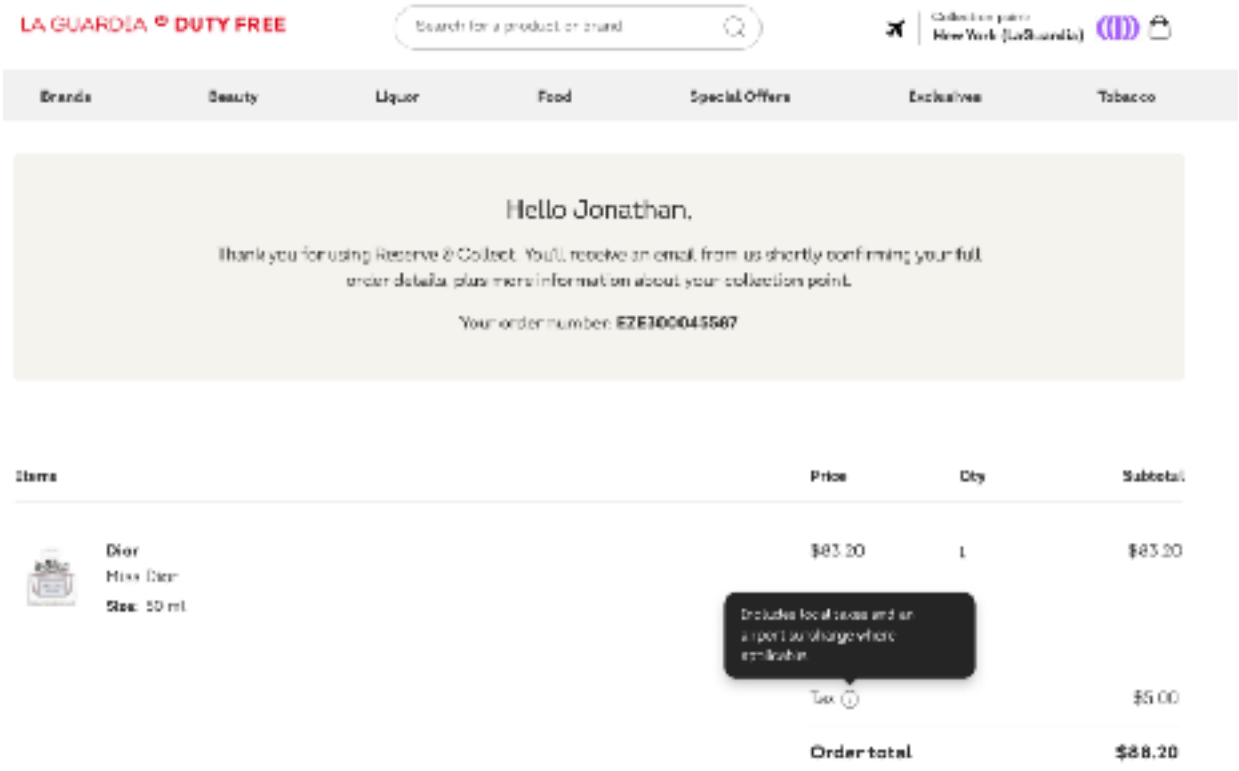
Goal

Ensure a mandatory 3% airport surcharge is correctly applied and transparently displayed on all RnC

Add a clear, informative tooltip to the order totals summary during checkout to explain the mandatory 3% airport surcharge for RnC orders at LGA, EWR Terminal A, and EWR Terminal C.

Description

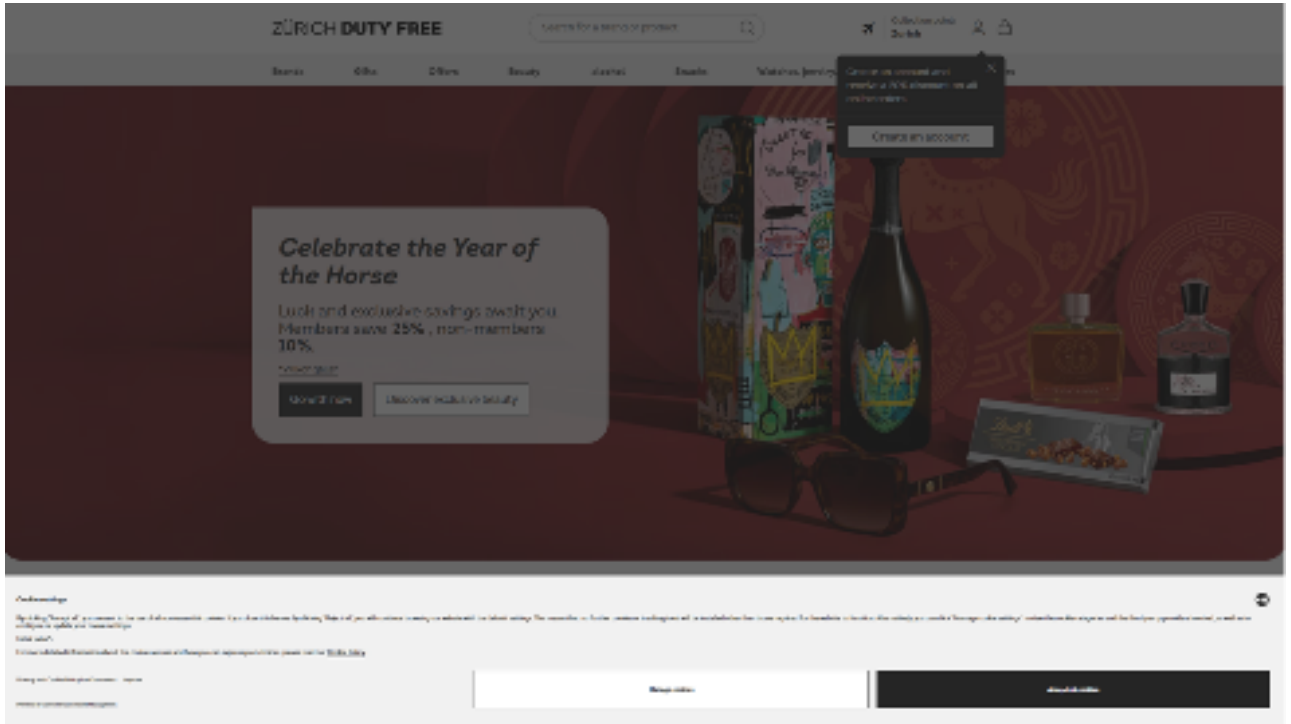
To comply with new airport requirements and avoid any surprises at pickup, we're updating our RnC experience to include a 3% airport surcharge when customers shop at LGA or EWR Terminals A and C. Going forward, in their order summary during checkout will clearly show this surcharge with a helpful tooltip explaining the charge, so totals online will always match what they pay at the airport.



4. Cookie Banner

Website
Reserve & Collect
Emporium
Club Avolta

Go Live Mar



Goal

Update copy on cookie banner to be legally compliant with GDPR policies following feedback from Gianluca and Compliance Team

Description

The copy used in the cookie banner required rewording and updating to legally align with GDPR policies with specific noting of what Avolta uses the data for and why

Additionally links to Cookie Policy, Legal Notice have all been updated to the latest Avolta version

Additional updates are being prepared to deploy CCPA version for N. America users and remove banner from countries without data privacy policies

Gifting CLP Categories

Website
Reserve & Collect
Emporium

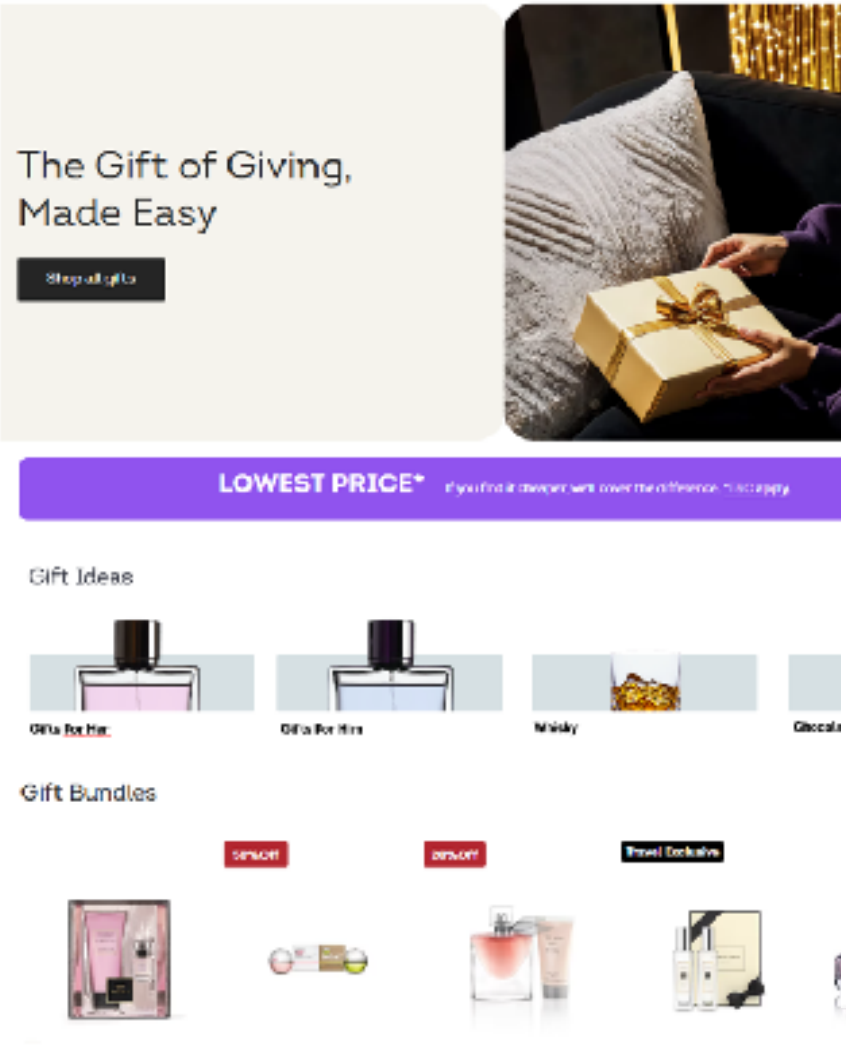
Go Live march

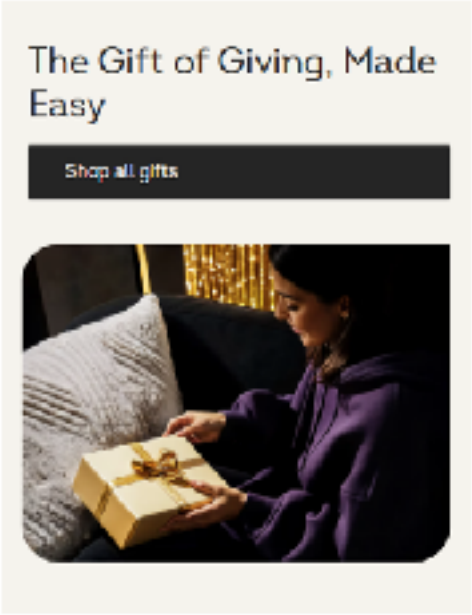
Goal

We will incorporate the top-performing gifting categories into the current Gifting Content Landing Pages (CLPs) to enhance navigation, increase product discoverability, and support user decision-making across key gifting moments.

Description

To strengthen the impact and usability of the Gifting CLPs, we will enrich them with a selection of high-intent categories and gift ideas. By including this curated mix of relevant themes, we aim to guide users more intuitively through the gifting journey, help them discover products aligned with their needs, and support faster decision-making.





Filters Visibility on Search Results Page

Website
Reserve & Collect
Emporium

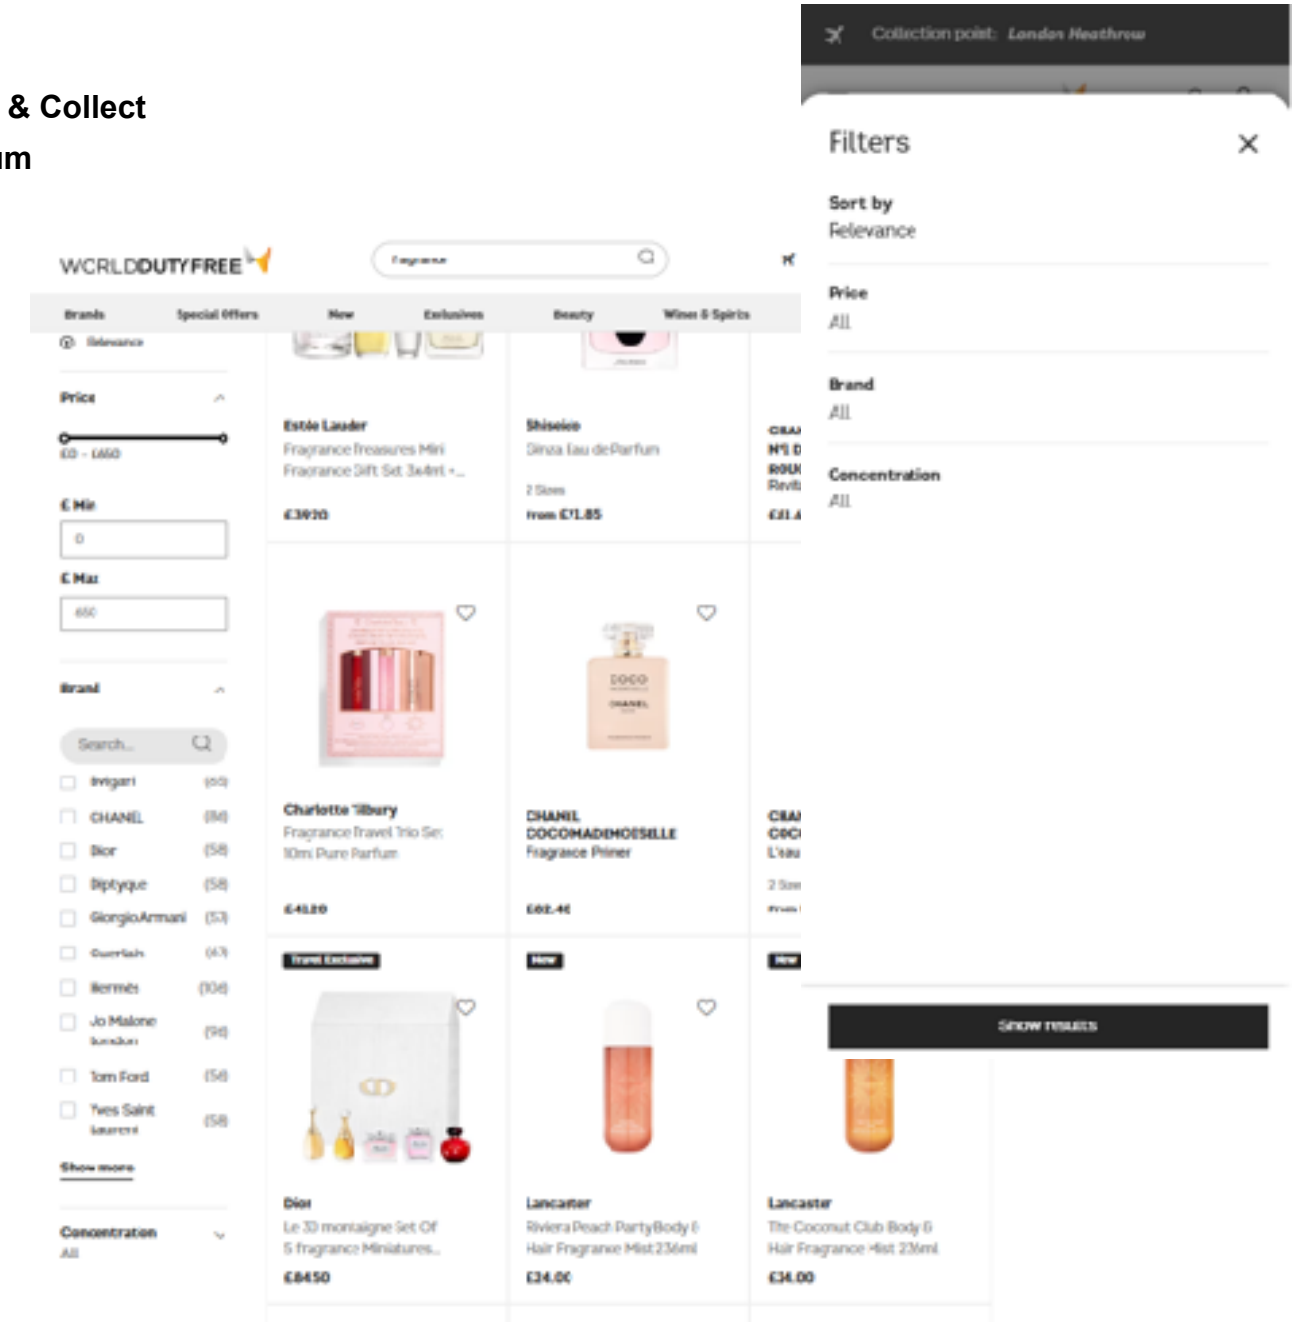
Go Live march

Goal

Ensure that all relevant filters available on Product Listing Pages (PLPs) are also visible, active, and functioning correctly across Search Results Pages. This will provide users with consistent filtering options, reduce navigation friction, and improve the relevance of search outcomes.

Description

Some filters currently available on PLPs are not appearing on Search Results Pages, which affects navigation and limits users' ability to refine their results. Our approach focuses on activating all PLP filters that should also be visible on Search Results Pages and performing thorough audits after implementation to confirm correct and consistent behaviour across all contexts.



Personalization Phase 2 > Search Box

Website
Reserve & Collect
Emporium

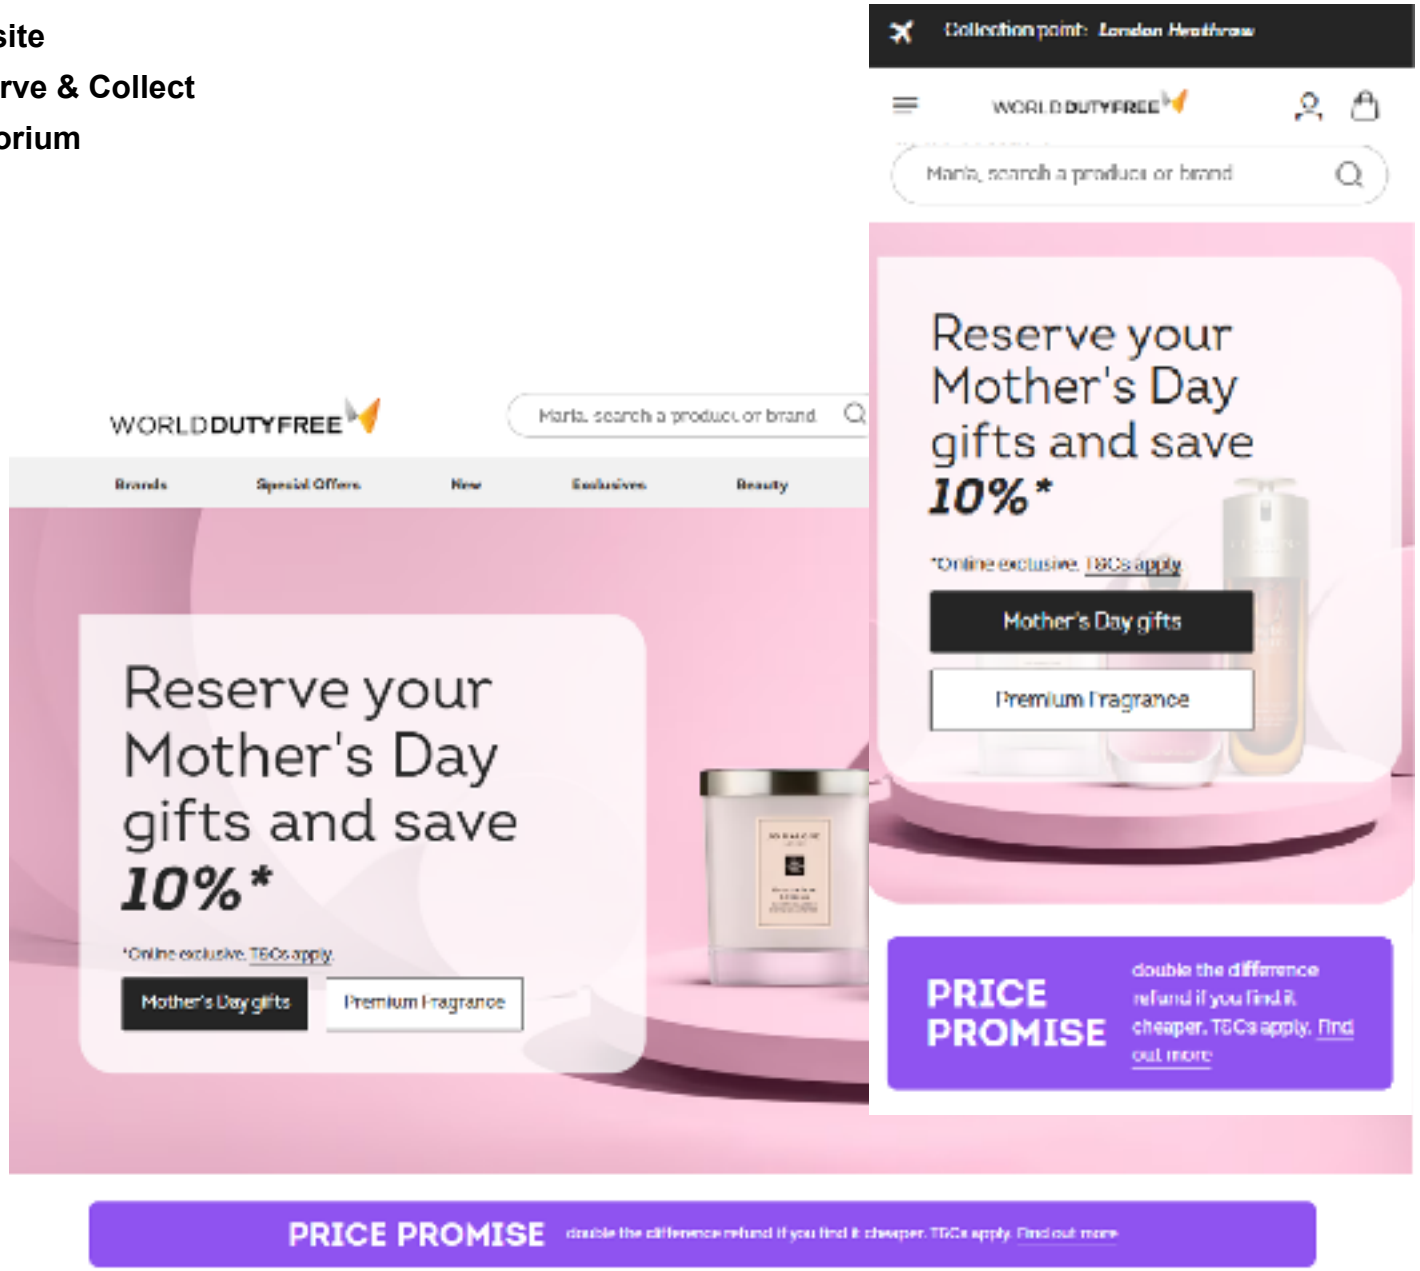
Go Live march

Goal

Increase engagement with the search feature by adding a personalized touch that displays the user's name directly in the search box.

Description

To elevate the relevance and emotional connection within the search experience, we will implement a personalized search box that displays the user's name when they visit the site. This enhancement supports a warmer, more customized interface while maintaining consistency across navigation touchpoints.



UK StaffShopping preference center

Content Golive: Ongoing: Nov

Goal

Restoring a clear, user-friendly, and compliant consent journey. This update will ensure that staff understand how to manage their communication consents and interact with a preference center that follows the correct standards and wording.

Description

This enhancement will update the wording, and workflow to ensure that opt-in and opt-out actions sync correctly with Salesforce and apply proper data governance rules. The result will be a brand-aligned consent process that improves customer clarity, supports marketing performance, and meets compliance expectations. All updates will be implemented using Adobe Target.

PHILIP TO INCLUDE SCREENSHOTS

02

App 6.17

In a nutshell

Released in January	Description
Attach Booking Code to Trip	Allow the user to attach their booking code to a trip.
Reserve & Collect in Travel	Provide users with a direct entry point to Reserve & Collect when available on their travel route.
Shops on Route	Show users the shops available along their travel journey.
Price per Unit	A legal compliance in UK that requires the display of Unit prices
Mandatory Shopping Bag Charge in Spain	A legal compliance that requires shopping bags to have a charge in Spain.

Avolta

4. Travel Edit/Delete Trip

Website Reserve & Collect

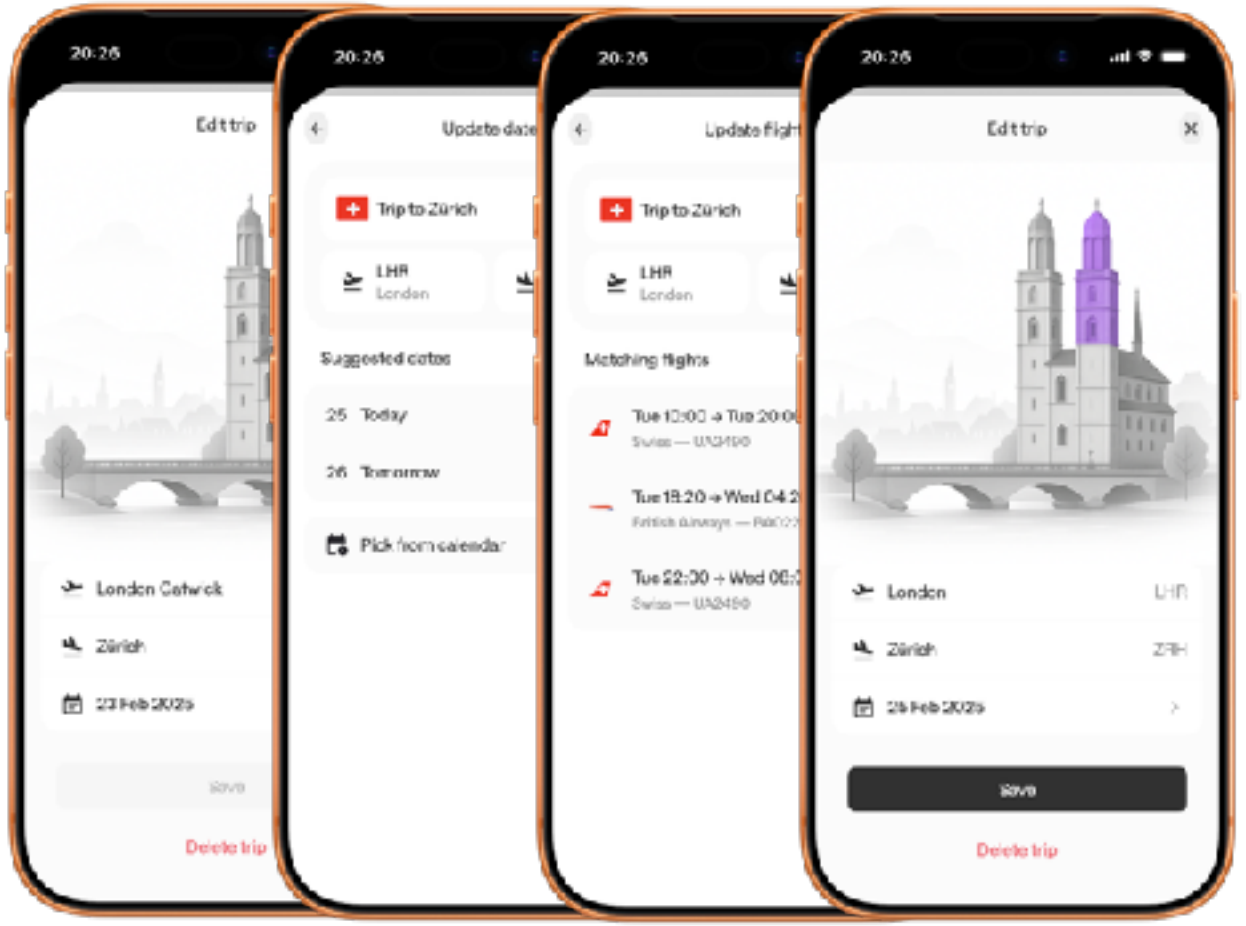
Go Live Feb

Goal

Enable users to edit trip dates within the app.

Description

This feature allows users to easily update their trip date in the app if their flight has been rescheduled. By providing the flexibility to edit trip dates, we help users keep their travel plans current and organized.



2. UK - Price per unit

Website
App

Go Live Mar

Goal

Enable legally compliant unit pricing across all UK digital customer surfaces, ensuring clear and accurate price per unit display everywhere a product price appears.

Description

we’re introducing transparent unit pricing wherever product prices are shown online. Whether you’re browsing listings, viewing product details, exploring promotions, or checking your cart, you’ll see prices broken down per litre, per kilogram, or per item (as required by UK law). This consistent approach will make it easier to compare products and ensure we meet all government guidelines, just like on our store shelves.

2. Mandatory Shopping Bag Charge (Spain)

Website
App

Go Live Mar

Goal

Enable a **chargeable shopping bag product for Spain** that customers can **explicitly add within the cart flow**, ensuring **legal compliance, pricing transparency, and full customer control**, without auto-adding bags or surfacing them in product listings.

Description

Implement a **shopping bag as a standard product** that can be **enabled/disabled in Magento BE** and displayed in the **cart as a selectable tile (same UX pattern as Gift Bag – DCR-21390)**.
The shopping bag:

- Is **not visible in PLP/SRP**
- Can be **added only from the cart**
- Is **not auto-added or pre-selected**
- Appears as a **line item across cart, mini-cart, checkout, and order confirmation once selected**
- Respects **stock availability**
- Allows **customer-controlled quantity**
- Updates totals **in real time**

Magento BE provides a **toggle to enable or disable the shopping bag display in the cart**.

In a nutshell

03 OMS Release

Non-ADV promotion and Club Avolta

- Avolta ID and tier displayed on the order detail page and the pick-up sheet.
- Non-adv promotions fields have UI validations.
- Exclude items from Non-ADV promotions using SAP codes

Locker:

- Added 2 new delivery statuses : *Locker booked* and *Locker retreived*

Operational enhancements

- Update cart calculation logic to exclude configured products from Non-ADV promotions.
- Quota violations section always in an expanded view.
- Stock source and Stock destination column added on the orders page.
- Added Club Avolta ID and Tier details to the order details page
- Import and display codes from Magento on the order details page and print order sheet.
- Added collection time to the Collection date column in the Order Fulfilment page

Loyalty tiers to be dynamically received from Salesforce

Go Live: Feb Release

Goal

To be able to add product exceptions to Non-ADV promotions using SAP codes
Display the quota violation section in a non-collapsible view

Description

The exception of products for promotions helps users choose which products they would like to exempt from the promotional offer.

The quota violation section was changed to an expanded view so that users are aware of the quota violations before they submit an order. Earlier this was missed as it was in a collapsed view.

04 SSO Release

In a nutshell

The technical topics on SSO this month are the following:

- Code cleanup & improvement activities
- Improvements to Account Merge
- Improvements to Marketing Consents and Preferences
- Improvements to Employee – FNF flow
- OTP verification at sign in – Phase 2
- Update of naming scheme for non-email accounts on Club Avolta

- Release 3.3.2 - March 11th
- Release 3.3.3 - March 25th

Enable OTP verification [Phase 1]

Available regions

Germany and Austria

Go Live: Feb Release

Goal

The goal is to improve the quality and reliability of Club Avolta customer registrations and be legally compliant by introducing a simple verification step for email addresses (and potentially phone numbers). This will help ensure that accounts are created with valid contact information, reduce fraud, and support compliance with local regulations in specific countries.

Description

Today, customers can register for Club Avolta without confirming that the email or phone number they provide is real. We aim to introduce a one-time verification code (OTP) for Germany and Austria as a first phase.

The rollout will be gradual across platforms (SSO Web, App, Tablets, Self Checkouts) to avoid operational disruptions. This change will help us protect the program from fake accounts, improve data accuracy, and meet legal requirements in markets like Germany and Austria.

Nex countries considered: Greece, Norway, Switzerland, Luxembourg, and Italy.

Introducing a verification step

New domain for transactional emails for Emporium and StaffShopping

Go Live: Feb Release

Goal

Ensure that all Magento transactional emails are delivered reliably by updating the sender domain to one that is fully aligned with our approved communication standards. This change will support consistent, secure, and effective communication for Emporium across all markets.

Description

Magento previously had @avolta.net domain, which has been internally blocked for security reasons when used by external systems.
All Magento transactional emails will be switched to the new sender domain @orders.avoltashopping.com, which is already approved and aligned with Salesforce communications. This update will apply to every transactional email type and to all country-specific sender addresses, including password-reset emails, ensuring consistent and reliable communication across regions.

05 My Autogrill Release

In a nutshell

1. My Autogrill Games - New Levels & UI Update
2. Menù, Gusta e Vinci – New Instant Win Launch
3. New Lead Generation & Campaign Landing Page

Avolta

My Autogrill Games - New Levels & UI Update

Available regions

Italy

Go Live: March Release

Goal

To enhance user engagement and retention by expanding gameplay content, refreshing the visual interface, and ensuring full compliance with updated legal and privacy standards across all gaming touchpoints.

Description

The March update introduces significant improvements to the gaming ecosystem, focusing on both user experience and content longevity:

- Expanded Gameplay: Increased the number of playable levels from 10 to 20 on the two most popular titles: Aui Tasty Bite and Aui Bubble Station, doubling the challenge for our users.
- Rewarding & UX Refresh: * Complete Home Page update with new, modern graphics.
- Full Coupon section update across all games, featuring optimized wording for better clarity.
- Compliance & Legal: Updated the Terms & Conditions and Privacy Policy pages in accordance with the latest received guidelines.

Menù, Gusta e Vinci – New Instant Win Launch

Available regions

Italy

Go Live: March Release

Goal

To seamlessly integrate the new promotional contest within the My Autogrill digital ecosystem, providing a frictionless user journey from physical touchpoints (QR codes) or digital banners to a dedicated, high-conversion gaming interface.

Description

Deployment of the **"Menù, Gusta e Vinci"** campaign (Live: March 25th – May 18th, 2026) across all digital touchpoints:

- **Dedicated UI Assets:** Implementation of promotional banners in-app and on My Autogrill/Autogrill websites.
- **Integrated UX:** Development of a dedicated **iFrame-connected Landing Page** for seamless login, registration, and game code entry.
- **Instant Win Engine: Real-time validation of purchase codes (Menù Perfetto, Combo, Kids) for instant rewards and final draw for 5 Samsung S26.**
- **Omnichannel Access:** Optimized redirection flows from in-store **QR codes** and online advertising directly to the contest area.

New Lead Generation & Campaign Landing Page

Available regions

Italy

Go Live: March Release

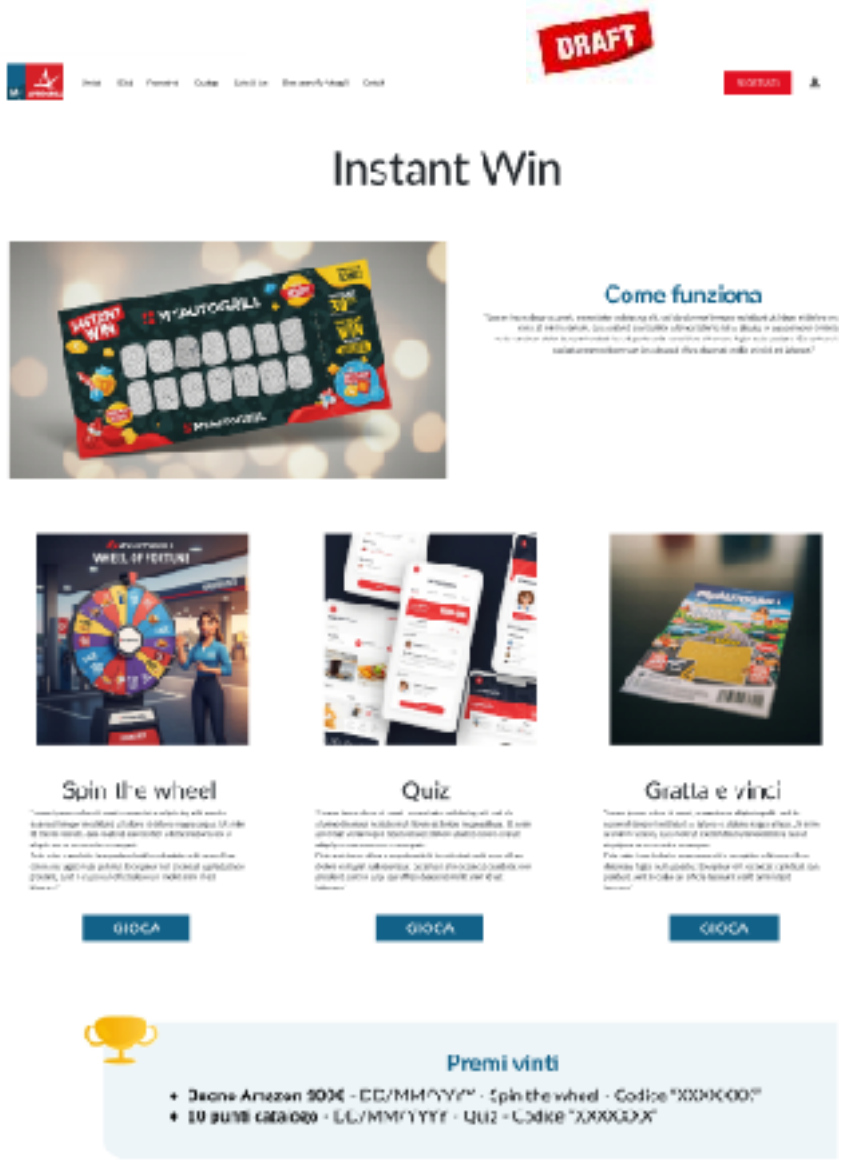
Goal

To maximize the ROI of paid marketing campaigns by providing a high-conversion, fully customizable landing page designed for seamless user registration and data-driven optimization.

Description

Deployment of a new versatile web asset specifically engineered for **Paid Acquisition** and **Lead Generation**:

- **Integrated Registration:** Features a streamlined, built-in sign-up flow to minimize friction and increase conversion rates for new My Autogrill members.
- **Dynamic Customization:** A flexible layout that can be updated in real-time with current initiatives, such as **Contests, Podcasts, or Gaming** activities.
- **Advanced Tracking:** Fully optimized to provide granular data for paid campaign performance and retargeting.



Thank you

Avolta
